DETAILED ACTION

1. This Office Action is response to Applicant's AMENDMENT filed on 04/25/2007.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Jerome G. Schaefer (Reg. No.: 50,800) on 05/30/2007 at 215-568-3100.

The application has been amended as follows:

Claims 15-21 and 22 are cancelled.

In claims 23 and 24, In the first line of claims 23 and 24, "a computer readable medium" replaces with "a computer readable storage medium"

3. Claims 1-14 and 23-24 are allowed.

Allowable Subject Matter

4. The present application has been thoroughly reviewed. Upon searching a variety of databases, the examiner respectfully submits that claims 1-14 and 23-24 are allowed in light of the applicant's argument and in light of the prior of made record.

Reason For Allowance

5. The following is an examiner's Statement of Reasons for Allowance:

The present invention is directed to a method, a system and a computer readable medium for locating classes in a class path. The cache is reconstructed when changes to the original information in the class path are detected and the wrapper is created for each element in the path manager to provide a level of indirection when calls are made to determine the location of a class.

6. The closest prior art, US Patent No.: 6,243,856 B1 issued to Meyer et al. (hereinafter Meyer) teaches a method of searching/locating/retrieving class files in a class path stored in a cache. Also, Meyer teaches using GUI as an interface or a wrapper for retrieving or searching class file in the class path. And Patent No.: US 6,738,975 B1 issued to Yee et al. (hereinafter Yee) teaches creating an interface as well as wrapper for the system to retrieving/searching the object – wrapper generation technology. In combination, Meyer and Yee fail to teach, “a wrapper indirection level providing for different caches to be used for selected element, requesting a search of class path via the wrapper, used by a class locator to search classes”. These distinct features, in conjunction with all other limitations of the dependents and independent claims renders claims 1-14 and 23-24 render them allowable.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
